

Security Breach Impact Report

Organization: Orion Health Services

Prepared by: Cybersecurity Analyst (Graduate)

Incident Type: Ransomware Attack

1. Executive Summary

On Monday morning, Orion Health Services experienced a ransomware attack disrupting critical systems and exposing sensitive data.

The attack originated from a phishing email sent to a finance team member, leading to unauthorized access.

Key systems including file servers, HR, and finance systems were impacted, with partial backup encryption.

2. Incident Overview

Attack Type: Ransomware

Initial Entry Point: Phishing email with malicious Excel attachment

Timeline: Morning detection, midday system lockouts, ransom note discovered

3. Scope of Impact

Compromised Data: Employee payroll records, patient appointment schedules, internal credentials

Affected Systems: File server, HR systems, finance systems, backup server (partially encrypted)

4. Attack Analysis

Initial Compromise: Malicious Excel file executed

Lateral Movement: Credential harvesting using Mimikatz

Execution: Files encrypted with .orionlock extension

5. Indicators of Compromise

Suspicious overseas login

Use of Mimikatz

Encrypted .orionlock files

Unusual outbound traffic

6. Business Impact

Operational: System downtime, service disruption

Financial: Recovery costs, potential fines

Reputation: Loss of trust and data risk

7. Immediate Response Actions

Isolate infected systems

Disable compromised accounts

Block malicious IPs

Restore systems from clean backups

8. Recommendations

Technical: MFA, patching, EDR, network segmentation

Awareness: Phishing training

Backup: Secure offline backups

Monitoring: SIEM implementation

9. Conclusion

This attack highlights risks from phishing and weak credential security.

Long-term improvements in awareness and security controls are essential.
